ABOUT THIMARK

Technocreations

Welcome to Thimark Technocreations (Pvt) Ltd, ISO 9001:2015 certified engineering enterprise driven by a commitment to excellence, reliability, and innovation. From our roots as a precision steel fabrication workshop, we have evolved into a dynamic leader in mechanical engineering and industrial manufacturing. Today, our expertise spans multiple critical sectors, delivering robust, high-performance solutions:

• **Design and Manufacturing of Industrial Machinery & Components:** We deliver customized machinery tailored precisely to client requirements, taking projects seamlessly from physical samples or engineering drawings to finished products. Utilizing advanced 3D scanning technology, we can reverse-engineer and replicate components from existing products, as well as perform rigorous virtual model testing for validation. A prime example of our international capabilities is our partnership with Varomatech Ltd to design and manufacture the advanced "Kilgharrah 600" automated trash-cleaning system for the Kenya Electricity Generating Company (KenGen).

• **Automotive Component Manufacturing (OEM):** Backed by our capacity for 3D modeling, precision fabrication, and virtual prototyping, we have established advanced manufacturing partnerships with leading industry names—including David Pieris Motor Company Lanka Ltd (Bajaj), Senaro Motor Company, and Ranatunga Motors—powering Sri Lanka's local motorcycle assembly sector.

Our Commitment to Quality and Sustainability

Quality and productivity are at the core of everything we do. By implementing rigorous lean manufacturing principles across our production lines, we ensure optimal efficiency, minimal waste, and uncompromised product excellence.

As we continue to invest in cutting-edge research, advanced manufacturing lines, and sustainable technologies, Thimark remains dedicated to empowering industries, driving technological localization, and shaping the future of engineering in Sri Lanka and across international markets.

OUR VISION & MISSION

Our Vision

Engineering Sri Lanka's future of mobility and innovation from quality components to world-class vehicles and machinery.

Our Mission

To advance Sri Lanka's industrial and automotive capability through precision engineering, innovation, and professionalism.

We specialize in designing and manufacturing high-quality two-wheeler components that support and strengthen our local motorcycle manufacturers, while also developing commercial vehicles and machinery that serve the needs of Sri Lanka's industries and infrastructure.

Guided by integrity, technology, and a strong commitment to ethical business practices, we strive to enhance local value addition, empower Sri Lankan engineering talent, and build dependable, purpose-driven vehicles and machinery proudly made in Sri Lanka.

OUR VALUES

- **Quality -** Commitment to producing high quality well engineered components
- **Timely Delivery -** Ensuring products are delivered on time
- **Reliability -** Providing dependable and consistent service
- **Professional Service -** Offering worry free, professional service to clients
- **Business Ethics and Integrity -** Upholding ethical conduct and strong moral principles

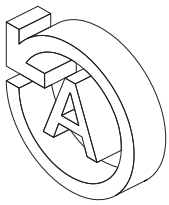

WHAT WE DO

Three Disciplines. One Shared Mindset.

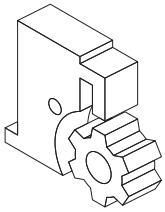

From components to complete machinery, we combine engineering and manufacturing for practical automotive and industrial solutions.

Automotive Components

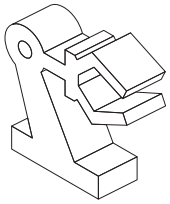

We design, fabricate and supply motorcycle components for local assembly lines, supporting established manufacturers with consistent production and dependable quality. Over 30% local value addition.

Engineering & Services

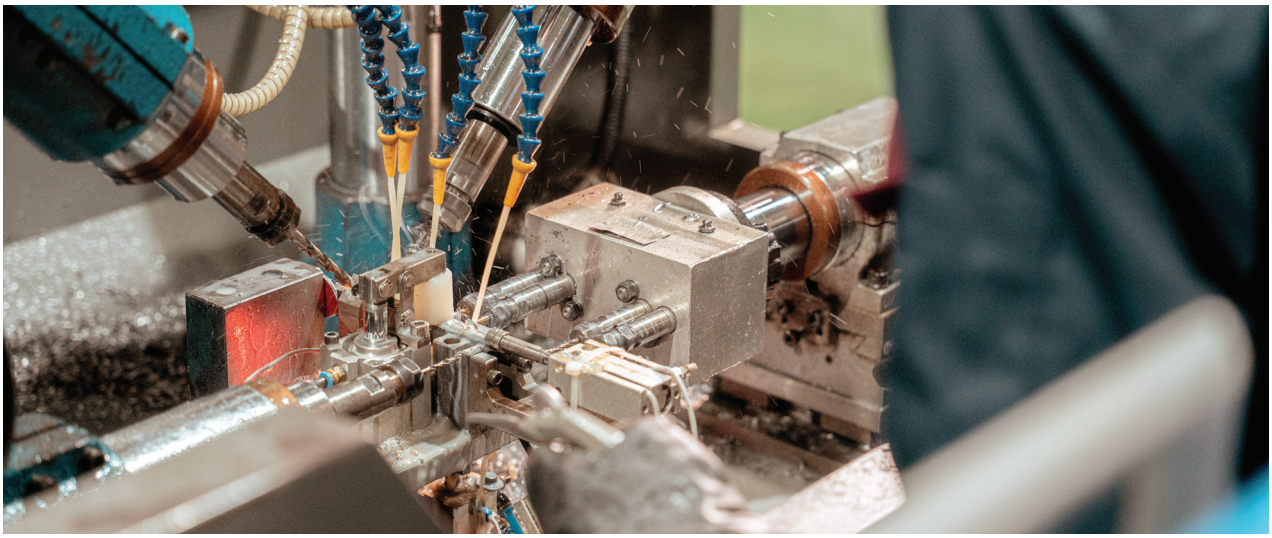

We take requirements from concept to finished part through new product development, reverse engineering and precision engineering.

Industrial Machinery

We design and manufacture custom machinery and fabricated systems for hydropower, water management, construction and other demanding industrial environments.

OEM AUTOMOTIVE COMPONENT MANUFACTURING

Your Trusted OEM Partner for Automotive Components
From 2-Wheelers to 4-Wheelers

Engineered for Localization. Built for Global Standards.

Thimark Technocreations (Pvt) Ltd is a strategic OEM manufacturing partner driving Sri Lanka's automotive localization vision. Starting as a trusted OEM supplier for the two-wheeler assembly sector, we have now expanded our design, engineering, and manufacturing capabilities to cater to two-wheelers, three-wheelers, and four-wheelers.

For international buyers and local assemblers, we offer a complete solution

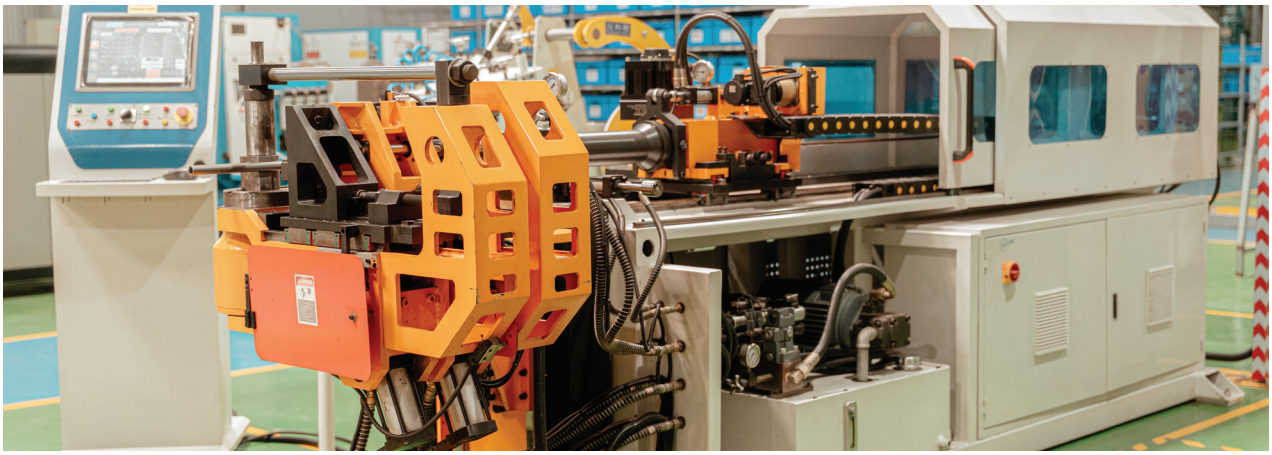

3D MODELING **VIRTUAL VALIDATION**

PRECISION FABRICATION **REVERSE ENGINEERING**

WORLD-CLASS SURFACE FINISHING

READY SUPPLY

We don't just manufacture parts. We create local value, reduce your import dependency, and deliver assembly-ready components that meet your exact OEM specifications.

What We Manufacture: A Complete Chassis & Body Component Ecosystem

Our automotive division, powered by our Ragama main plant and our new surface finishing facility at IDB Ekala (C3 Factory), manufactures:

- **Chassis & Structural Systems** – Main frames, sub-frames, swing arms, cargo three-wheeler chassis and heavy-duty load-bearing structures. Complete motor bicycle and cargo three wheeler chassis designed, fabricated and road-tested.
- **Body, Frame & Sheet Metal Components** – Fenders, side covers, carrier brackets, footrests, battery boxes, cargo beds, cabins and customized sheet metal assemblies.
- **Precision Components & Assemblies** – Handlebars, stands, machined components, jigs, fixtures and welded assemblies requiring high dimensional accuracy.

All components are delivered with our in-house surface finishing – Automated Powder Coating, ED Coating and Zinc Plating – directly from our Ekala plant.

Our Competitive Edge: Reverse Engineering to Road-Ready

Reverse Engineering & 3D Modeling: Your physical sample is converted into a manufacturing-ready 3D model using 3D scanning and SOLIDWORKS CAD. No drawings? No problem.

• **Virtual Prototyping & Testing:** Critical components, especially chassis, undergo CAE-based virtual testing and FEA/FEM analysis for load, vibration and fatigue before tooling.

• **Precision Fabrication & Lean Manufacturing:** CNC cutting, bending and certified welding, with lean principles, for consistent quality and on-time delivery of high-volume OEM orders.

• **One-Stop Finishing:** Four coating lines under one roof at Ekala keep your components inside our quality control loop.

Trusted by Sri Lanka's Leading Automotive Brands

Our quality and reliability are proven by long-term partnerships with Sri Lanka's most respected vehicle assemblers:

- **David Pieris Motor Company Lanka (Pvt) Ltd (Bajaj)**
- **Senaro Motor Company (Pvt) Ltd**
- **Ranatunga Motors (Ranomoto)**
- **Dyno Motors, NWOW, Lencar and other leading assemblers**

We meet strict OEM tolerances, maintain consistent batch-to-batch quality and support our partners' localization targets of 30%+ local value addition.

From Two-Wheelers to Future Mobility

Leveraging the same engineering DNA — 3D modeling, virtual validation and precision manufacturing — we are equipped to extend into three-wheeler cargo and passenger platforms and four-wheeler commercial vehicle components, including electric vehicle (EV) structures. With investments in R&D for passenger vehicle development, Thimark is positioning itself as Sri Lanka's hub for automotive component manufacturing for both local assembly and export.

Whether you need to localize a single bracket or co-develop a complete cargo three-wheeler chassis — we are ready to engineer it with you.

PRODUCT RANGE

Precision Components for Leading Motorcycle Brands.

Bajaj CT 100

Bar Pillion LH & RH | Battery Bracket | Number Plate Bracket Rear | Plate Step | Stay Pillion

Bajaj Pulsar N160

Belly Pan LH & RH | Bracket ABS | Bracket Hanger Engine Front LH & RH | Bracket | Bracket LH & RH

Other Bajaj Components

Center Stand | Fender | Handle Bar | Hanger Engine LH & RH | Hook | Hook Assembly | Latch Seat | Leg Guard | Number Plate Front & Rear | Saree Guard | Seat Rear | Side Stand | Spanner Flat | Speedometer Bracket

Senaro GN125

Belly Pan LH & RH | Bracket ABS | Bracket Hanger Engine Front LH & RH | Bracket | Bracket LH & RH

Senaro Click 150i

Center Stand | Handle Bar | Rear Bracket

Ranomoto Moped

Center Stand | Handle Bar | Rear Carrier | Side Stand

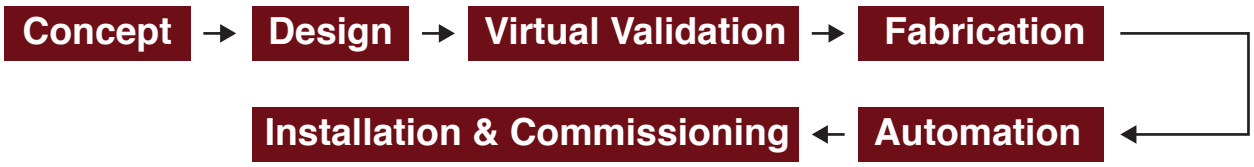

INDUSTRIAL MACHINERY DESIGN & MANUFACTURING

Custom-Engineered Industrial Machinery. From Concept to Commissioning.

Our Industrial Machinery division is the heart of our engineering legacy: an ISO 9001:2015 certified, end-to-end machinery manufacturer serving Sri Lanka's hydropower, water supply, construction and heavy manufacturing sectors — and now, international markets.

Whether you have a detailed drawing, a worn-out physical sample or a complex operational challenge, we take full ownership from,

Our Core Industrial Machinery Portfolio

Water Sector & Hydropower Infrastructure – our flagship domain; Sri Lanka's leading manufacturer for water management infrastructure:

- **Automated Hydraulic Trash Cleaning Systems (e.g: KILGHARRAH 600)**
- **Automated Rotary Trash Screens & Trash Racks**
- **Sluice Gates, Penstock Gates & Stop Logs**
- **Sludge Scrapers & Scum Skimmers for Water Treatment Plants**

Industrial Processing & Material Handling Systems – custom-built for efficiency and continuous operation:

- **Pneumatic Conveying Systems**
- **Industrial Dust Collection & Bag Filter Systems**
- **Custom Fabrication Lines & Special Purpose Machines (SPM)**
- **Heavy Steel Structures, Tanks, and Process Equipment**

Why Global Clients Trust Thimark?
Our Engineering Workflow

1. Reverse Engineering & 3D Scanning: Obsolete part with no drawings? 3D scanning digitizes your physical sample into a precise 3D CAD model, accurate to microns.

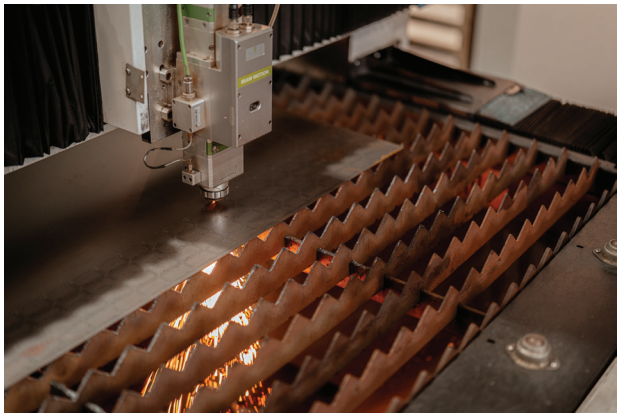

2. Design & Virtual Prototyping (CAE): Every machine is designed in AutoCAD & SOLIDWORKS 3D and validated with FEA / FEM before a single plate is cut — the same methodology we used to beat German bidders for the Kenyan project.

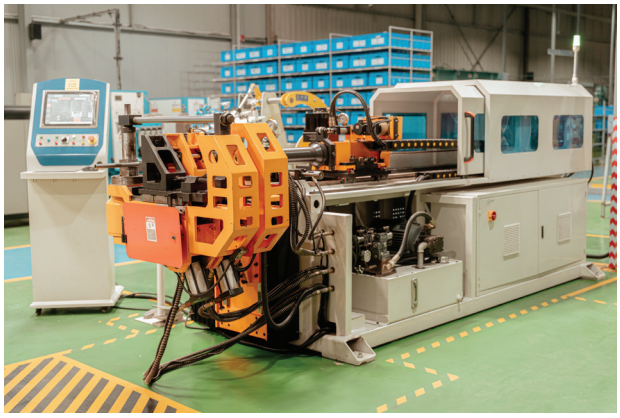

3. Precision Manufacturing: CNC Plasma Cutting, CNC Press Brake, Guillotine Shears and certified TIG, MIG, MAG & ARC welding systems at our Ragama facility.

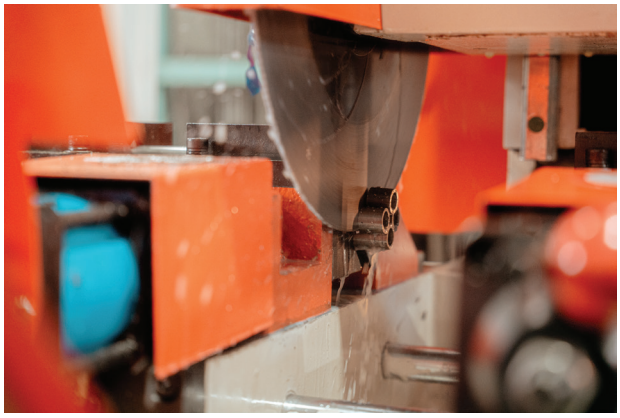

4. Automation & Control: Hydraulics, PLCs and intelligent control systems turn heavy steel into smart, automated machinery.

5. In-House Surface Finishing: Automated Powder Coating, ED Coating and Hard Chrome Plating at IDB Ekala (C3), ensuring 10+ years of corrosion life.

Proven International Capability: The KenGen Success Story

Thimark was awarded a US $156,000 contract by Kenya Electricity Generating Company (KenGen), Kenya's national power producer responsible for 70% of the country's electricity, to design, manufacture and commission the KILGHARRAH 600 — a fully automated, movable hydraulic trash rack cleaning machine. The first of its kind designed and manufactured in Sri Lanka, it was selected over competitive international bids.

Executed in partnership with Varomatech Ltd, Kenya, this project marks our entry as an exporter of advanced, intelligent engineering solutions to Africa.

Your Challenge is Our Blueprint.

We are not a catalog company. We are a custom engineering partner. If you are a foreign EPC contractor, hydropower developer, water utility or industrial plant looking for a reliable, cost competitive manufacturing partner in South Asia, with full traceability and ISO-certified quality — Thimark is your answer.

Let's engineer your next breakthrough.

THIMARK ADVANCED SURFACE FINISHING FACILITY AT EKALA

A One-Stop, Export-Ready Surface Treatment Hub for Global OEMs

Thimark has secured a 20-year lease for the C3 Factory Building at the IDB Industrial Estate, Ekala – Sri Lanka's premier industrial zone, minutes from the country's principal transit and logistics hubs. The facility eliminates a critical bottleneck in Sri Lanka's manufacturing ecosystem: high-quality, environmentally compliant surface finishing, **with four advanced treatment lines under one roof.**

1. **Automated Powder Coating Line** – High-durability, UV-resistant finish for machinery, automotive frames and architectural components, with consistent thickness and zero-defect coverage.

2. ED / E-Coating Line (CAE) – Superior corrosion protection for complex geometries, with uniform coating even in recessed areas, meeting international OEM standards.

3. Black Zinc Electroplating Line – High corrosion resistance (up to 500+ hours salt spray) with a premium finish for automotive fasteners and precision parts.

4. Hard Chromium Electroplating Line (Cu-Ni-Cr) – Multi-layer system for extreme wear resistance on hydraulic shafts, moulds and heavy-duty components.

The Foundation of Quality:
Our 11-Dip Precision Pre-Treatment System

We believe coating quality is 80% pre-treatment. Our advanced 11-Stage Dip Pre-Treatment System — rarely found in the region — guarantees maximum adhesion and corrosion life.

Process Flow: **Degreasing** → **Rinses** (DI & Industrial Water) → **Acid Pickling / Rust Removal** → **Surface Activation** → **Phosphating** → **Passivation**

Built for Global Compliance: Green & Safe Manufacturing

- **Zero-Discharge Closed-Loop Engineering: complete wastewater recovery and recycling**
- **Advanced Wastewater Management & Effluent Treatment Plant (ETP)**
- **Chemical Handling Safeguards & Fume Scrubbing Systems**
- **Compliant with CEA, BOI Environmental Norms, ISO 14001 & ISO 45001 requirements**

This makes us a reliable, audit-ready partner for EU, US and Japanese customers.

Why Global Customers Choose Thimark?

- **One-Stop Solution:** Fabrication + Machining + Surface Finishing = reduced lead time & logistics cost
- **Export-Ready Location:** Inside IDB Estate, close to Port and Airport
- **ISO 9001:2015 Certified Processes** with full traceability
- **Scalable Capacity** for high-volume OEM orders
- **Your Confidential Manufacturing Partner** in South Asia

QUALITY BY DESIGN

Precision Is a Process, Not a Promise.

At Thimark, quality is not inspected at the end. It is built into every step. ISO 9001:2015 and CIDA EM2 Grade reflect our commitment to controlled production and consistent results.

Every component undergoes precise dimensional inspection against your drawings. Our in-house surface finishing at Ekala is validated by coating thickness measurement, and from every production batch we take samples for destructive weld testing — to ensure every joint will hold.

Our principle: Reduce waste. Improve processes. Create consistent value.

1. Dimensional Check ⟶ Shape, Size & Tolerance

2. Coating Validation ⟶ Thickness Gauge Testing

3. Batch Weld Test ⟶ Sample Destructive Testing

ISO 9001:2015 Certified I Zero Compromise

RESOURCES, AWARDS & CSR

Resources & Capabilities

95 skilled employees | 7 qualified engineers | 120+ projects completed | 29,500 sq. ft. modern factory, plus the Ekala surface finishing facility

Awards & Recognitions

- **CNCI Achiever Award (2026)** – Silver Award, National Level Manufacturing Sector, Medium Category.
- **National Business Excellence Awards (2026)** – Winner (Gold): Excellence in Business & Financial Results; Winner (Gold): Manufacturing – Engineering Sector. Category: Medium.
- **SLTC Research and Innovation Awards (2026) - Winner:** Excellence in In-House R&D Award (Energy, Electronics and Engineering Research); Winner: Merit award for outstanding R&D in SME (Energy, Electronics and engineering research)
- **NCI Achiever Awards (2026)** - Silver award: National level manufacturing sector (Medium category)
- **CNCI Achiever Award (2025)** – Bronze Award, National Level Manufacturing Sector, Small Category.
- **National Industry Excellence Awards (2023)** – Gold Award, Metal-Based Components Manufacturing Sector.

Sustainability & CSR

Environmental Responsibility – We optimize resource usage, minimize material waste and adopt energy-efficient processes. Our Ekala facility is engineered around closed-loop water recovery and effluent treatment.

Local Empowerment – Over 95% of our workforce is locally sourced, with continuous training so our people grow alongside the company.

Community Engagement – We sponsor practice kits for the Kandukara Cricket Club in Badalkumbura, year after year, a team that competes in the Governor's Trophy organized by Sri Lanka Cricket, nurturing young talent, teamwork and discipline beyond the factory floor.

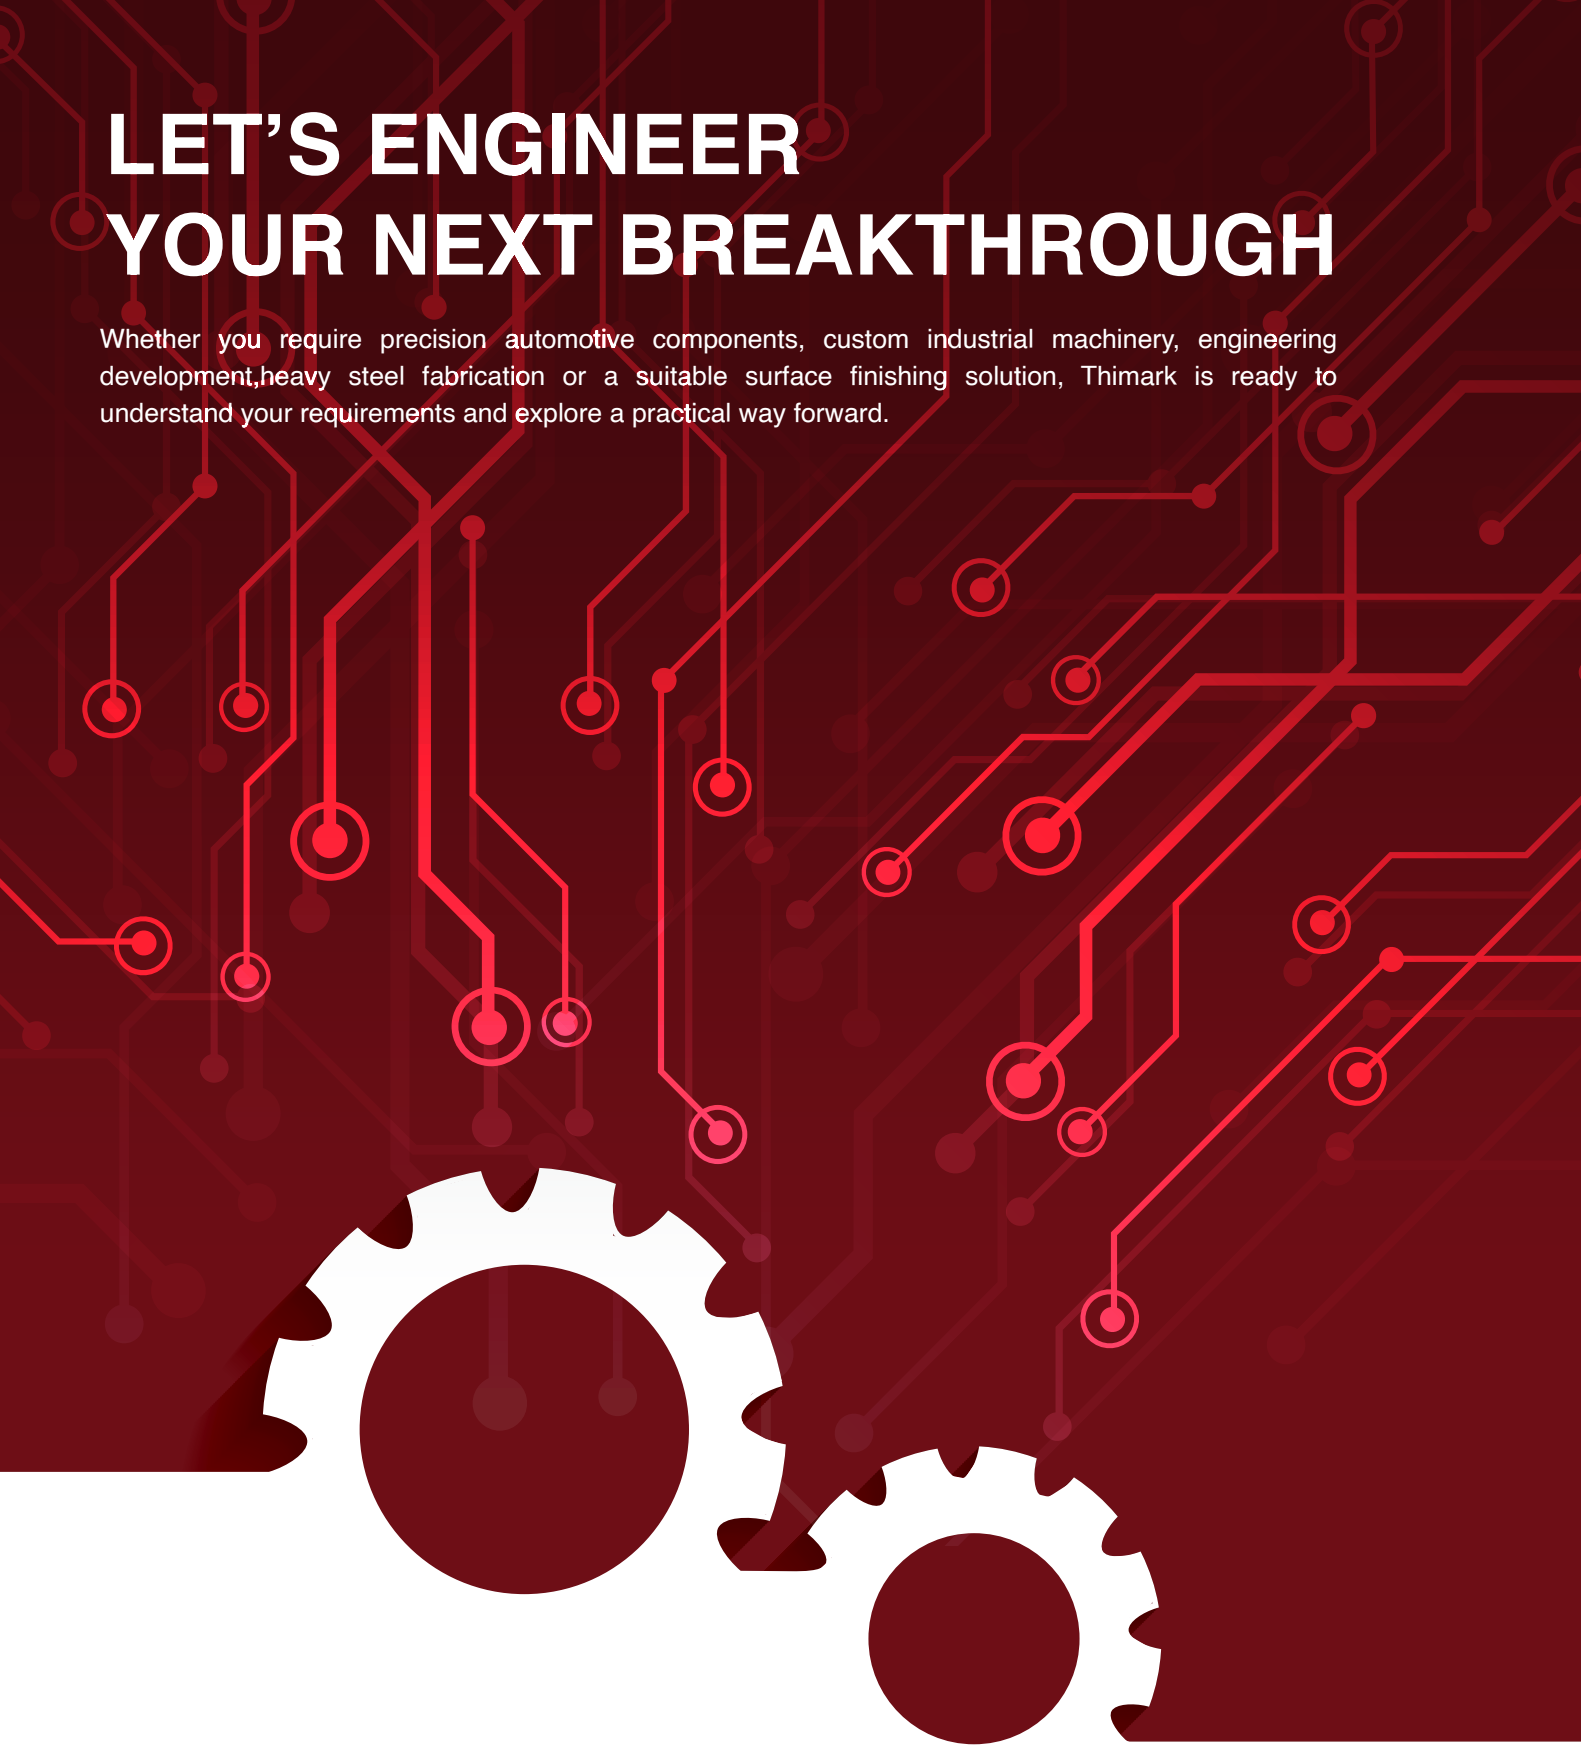

LET'S ENGINEER YOUR NEXT BREAKTHROUGH

Whether you require precision automotive components, custom industrial machinery, engineering development,heavy steel fabrication or a suitable surface finishing solution, Thimark is ready to understand your requirements and explore a practical way forward.
